Transition phase

The purpose is to fine-tune functionality, performance, and overall quality of the beta product:

***Beta test to validate that user expectations are met.** It includes bug-fixing and making enhancements for performance and usability.*

***Achieve stakeholder concurrence that deployment is complete.** Discuss this issue with your supervisors.*

***Document lessons learned** for performance improvement in future projects. You will be asked for writing it in the final self- and peer-evaluation.*

Project dissemination

1. Demonstration video
2. Public version of your project website
 - a. Choose the platform that will be the public entry to your project in the future.
 - b. Look for the keywords that can bring in visitors (tip: search the web for generic keywords and keywords in similar applications).
 - c. Plan the structure and the contents of your project website. Ask your supervisors which information should not be public.
 - d. Include the video and other promotional materials.

Milestone 4

Prepare a 15 minutes presentation:

1. Demo of the final project
2. Show your project website (github, jira, trello, etc.)
3. Plan of the public version of your project website.

Additional information in the calendar.
