

# Practical Work 1

## Introduction

The first practical work is all about using Django Framework to develop a web application. The theme is free, chosen by the students, and must be developed in groups of 2 or 3 students.

## Goals

- Development of a web application (client and server side), to allow the information access in an easy and intuitive way.
- The application must be developed with all interfaces for client side and functionalities for server-side, in association with the database, to allow all kind of operations: information showing, data searching, insertion, updating, deleting and all subsequent validations.
- It must also be developed in a modular way, encapsulating the three components: data, logic and presentation; using all learned technics.
- ...
